Questions [questions in my mind]

NO.	SRS section	Question
1	7.1	Who is the regional director and which branch is he in ?
2	7.1	How do we calculate the commission of the agent and do we save it for each rental ?
3	7.2	What is the passing score of a course ?
4	7.3	Is the special price for one car or for all cars of that model ?
5	7.7	Can one person be a company driver and also an individual customer ?
6	7.7	Can we remove a customer from the blacklist after some time ?
7	7.9	Can a promo code work together with a corporate discount ?
8	7.10	How many points are equal to how much discount ?
9	7.12	Is the additional driver a real person with data or just an extra fee ?
10	7.16	Do we need refunds because every payment must be above zero ?

Assumptions [my decisions]

NO.	SRS section	Assumption
1	7.1	The regional director is just a normal employee and we do not save the temporary replacement
2	7.1	We save only the current branch manager and not the old ones
3	7.1	An employee can be an agent or a mechanic but not both and the other staff are just employees
4	7.2	Every course attempt is a new row with an attempt number so no attempt is lost
5	7.3	We never change a category price and we add a new row with start and end date
6	7.3	The special car price is a column in the vehicle table and if it is empty we use the category price
7	7.3	The car status is in the vehicle table and every change goes to a log table
8	7.4 / 7.13	The price of extras and insurance is saved again inside the rental because prices change
9	7.7	A customer is individual or corporate and an individual has a national ID or a passport
10	7.7	Authorized drivers belong to one company and they are deleted with the company
11	7.10	Every point earned or used is a separate row and the tier is calculated from the points
12	7.12	A reservation becomes one rental at most and walk-in rentals have no reservation
13	7.12	Return date and return odometer and receiving agent stay empty until the car comes back
14	7.12	The additional driver has a name and license number and daily fee because the SRS gives no details

Contradictions

NO.	Sections	What they say	What I did
1	7.1 and 7.1	A manager runs only one branch and a branch always has a manager but the regional director takes the place of a manager for a while and may cover many branches	The branch always has one manager in the database and the replacement is not saved
2	7.3 and COO note	Prices are per category but the COO says some luxury cars have their own price	I added a special price column in the vehicle table and if it is empty the category price is used
3	7.7 and Section 8	Authorized drivers are known only through their company but Ms Rana says the same person can also be an individual customer	The driver stays linked to the company only and if he is also a customer he is saved twice
4	Section 6 and Section 8	Finance handles refunds but every payment must be above zero and 7.16 has no refund type	Payment amount must be above zero and refunds are left as a question

Name: _____ Group / ID: _____ | 4-Business-Rules

#	SRS section	Business rule	Why constraints are not enough	How to enforce it
1	7.7	A blacklisted customer cannot book again	We need to look in another table and a CHECK only sees its own row	Application logic the program checks the blacklist before saving the booking and refuses it if the customer is there
2	7.3 and 7.12	The same car cannot be rented twice in the same dates	We must compare dates of many rentals and a CHECK cannot do that	Application logic at check-out the program looks for other rentals of this car in the same dates and refuses if it finds one
3	7.9	A promo code cannot be used more than its maximum uses	We must count the old reservations that used the code	Application logic before saving a reservation the program counts the uses of the code and refuses if the maximum is reached
4	7.10	A customer cannot use more points than he has	The balance is the total of many rows and not one column	Application logic before redeeming the program adds the customer points and refuses if he asks for more
